

Mustafa Murtaza

Software Engineering Student

Sector 11-B, North Karachi, Karachi, Pakistan | 03082143452 | mustafamurtaza032@gmail.com

LinkedIn (<https://www.linkedin.com/in/mustafamurtaza-mm/>) | GitHub (<https://github.com/mustafamurtaza-mm>)

Professional Summary

Software Engineering student skilled in C#, Java, Python, JavaScript, SQL, React, Node.js, and MongoDB. Experienced in developing full-stack, desktop, and machine learning applications. Seeking a software engineering internship to contribute to real-world software solutions and grow as a developer.

Technical Skills

- **Languages:** Java, C#, Python (NumPy, Pandas, Matplotlib, Seaborn, Gradio, Scikit-learn), HTML, CSS, JavaScript, Dart.
- **Frameworks and Tools:** MERN Stack, ASP.NET, .NET Console, RESTful APIs, Git, Visual Studio, VS Code, IntelliJ, NetBeans, Jupyter Notebook, Google Colab, Flutter.
- **Databases:** SQL Server, MongoDB Atlas, SSMS, database design & management.
- **Core Concepts:** Object-oriented Programming, data structures and algorithms, MVC architecture.

Projects

DriftTask (<https://github.com/mustafamurtaza-mm/Drifttask>)

MERN Stack, React.js, Node.js, MongoDB Atlas, Socket.IO, JWT.

- Developed a real-time task management platform for university student groups using MERN stack, improving team coordination and productivity
- Implemented Socket.IO for instant task updates and live collaboration, along with RBAC.
- Built secure REST APIs with JWT authentication, integrated MongoDB Atlas for cloud-hosted storage, and structured the application for future cloud deployment.

Hospital Management System (<https://github.com/mustafamurtaza-mm/Hospital-Management-System>)

C#, SQL Server, MVC Architecture

- Developed a complete hospital management system with appointment scheduling, billing, and record tracking.
- Designed a normalized SQL database and stored procedures, improving data retrieval speed.
- Applied MVC architecture to separate concerns, making the system easier to maintain.

Predictive Health Analysis System (Team Project – Advanced Algorithms Specialist)

Python, Pandas, Scikit-learn, Gradio, PCA

- Built a multi-disease system using 9 ML algorithms
- Created data pipelines for 5 datasets (7000+ records), applied PCA (>90% variance preserved), and built a Gradio web interface for real-time risk prediction.
- Achieved 85-95% accuracy; collaborated in a team of 4 as Advanced Algorithms Specialist
- GitHub: (<https://github.com/mustafamurtaza-mm/Predictive-Health-Analysis-System>)

Education

Bahria University – Bachelor of Software Engineering (BSE) (2023 - Present).

- **Relevant Coursework:** Object-oriented programming (Grade A), Data Structures & Algorithms Lab (A-), Database Systems, Software Design and Architecture.

Bahria College Karsaz – Pre- Engineering (2021-2023) | 80.5%

Karachi Public School – Computer Science (2019-2021) | 98.1%

Additional

- **Languages:** Fluent in English & Urdu (Written and Spoken)
- **Leadership:** Led a 4-member team in a data science project.
- **Soft Skills:** Problem analysis, team collaboration, clear documentation, time management
